AG-364

Airless Spray Gun

Introducing our latest innovation — the Binks® AG-364 Airless Spray Gun. This spray gun offers improved transfer efficiency and a convenient way to keep your equipment cleaner.

Available with dead head or recirculation manifolds, the AG-364 significantly reduces paint waste and shortens cleaning time. It achieves exceptional transfer efficiency, leading to less overspray, cleaner machines, and lower coating costs per part. The spray gun features a soft, high-integrity fan pattern that ensures consistent application of materials on detailed profiles and surfaces.

The tip holder can be adjusted 45 degrees with the insert and is fully adjustable without it. The versatility of the tips used with the AG-364 allows for the application of various wood finish materials.

As part of the trusted AG family, the AG-364 makes transitioning from air-assisted airless equipment easy. It works with the same pumps, fluid lines, regulators, and fluid pressure ranges, ensuring a seamless upgrade.

FEATURES

- Increased transfer efficiency reduces overspray, time, material
- Softer high integrity fan pattern creates consistent application
- Tip versatility allows use on a variety of wood finishes
- Tip holder indexes 45° with insert (Completely adjustable without insert)
